1 Repair Overview

1.1 General information

General KRC's (including all "/xx" variants except those mentioned in Exceptions).

GHY-fields are only used by GCS in special cases; this information is for factory mainly.

G-field = R-state of the CXC module (SW).

H-field = R-state of the hardware (Mechanics).

Y₁-field = R-state of the 1/KRC (everything except ROA antenna flip etc.).

Y₂-field = Variant of the ROA (different components/values due to many suppliers)

Y₃-field = R-state of the ROA (different upgrades or changes)

GHY₁Y₂Y₃ -fields are found after the TYPE no. on the label.

The Repair Revision is a mandatory repair upgrade or check that need to be performed at every repair apart from fixing the actual problem.

If your Repair Centre has the label process don't change the factory revision on the label after a repair. Use instead the "Repair Rev. Out" in the table for input to Labelmake's Repair revision field.

The SI ref. is the original document; if you search on the first four digits in SI ref. you'll find your version of it on CSPN.

2 Additional Information

2.1 Label for T39

Keep the original Factory revision and Production week on the unit and add the repair week and repair revision from the Repair rev. out field in the table above under the header “Revision overview”.

2.2 Service provider lock for T39

1. Insert the phase 2 (test) SIM-card.
2. Connect the battery.
3. Turn on the phone by pressing the NO-key.
4. Press the following sequence on the keyboard < * * < the display shows ”Personalise”
5. By pressing either of the arrow-keys you can glance trough the different types of SIM-lock

Following sequence of symbols should appear in the display when pressing the right arrow-key.

(Some may not show if they aren’t available on the SIM)

Personalise:

| | |
|--------------------|---|
| 1.Network |  |
| 2.Network subset |  |
| 3.Service Provider |  |
| 4.Co-operate |  |

x = an image in the display of a locked/unlocked padlock

Co-operative Network Lock won’t show as a menu in the list, it show up as a normal NCK lock and there is no way you could see it as a Co-operative network lock unless you looked at the network provider who would see that it would have several PLMN’s.
You cannot lock a Co-operative network lock manually; it has to be done at the factory.

To manually lock/unlock you go in under the appropriate SIM lock and write the code supplied from the operator (or in special advanced repair cases, Ericsson (require special access))

If you find any other SIM-lock combination the phone must be sent to an Advanced Centre.

2.3 Description of variants

SIM-Lock 1 = LENC Network Lock

SIM-Lock 2 = LENS Network Subset Lock

SIM-Lock 3 = LESP Service Provider Lock (GID1)

SIM-Lock 4 = LECC Corporate Control Lock (GID2)

SIM-Lock 5 = LCNL Co-operative Network Lock (multi SIM-lock)

Note that the following table is valid for R320, R520 and T39-family products and not all variants exist for all products.

| Variant | Co-Branded / Ericsson | SIM-Lock | Operator | Market |
